

Prepare to watch a racing legend pull himself back into competitive racing, while building a quarter-mile killer.

## The Next Steps

Well, here we sit with a nearly bare chassis – no engine, no swingarm, no fork tubes. If we were totally concerned with looks, we'd continue to strip it all the way down and send it out for polishing, chrome or powder coating. But, this bike's about power and function first, affordability second, and looks third. We'll resist the urge to bling it out, saving our precious monetary units for the tasty bits that make this project so much more than just another poser.

In the months to come, we'll not only learn how to put all this craziness back together, but we'll see engine preparation, turbocharging and power management. We'll also touch on datalogging and show you how to use today's technology to make this entire mission happen with the minimum fuss and the maximum results. **ZWT**

PUT TOGETHER  
A TURBO  
BUSBA ENGINE  
THAT STAYS  
TOGETHER!
